

**SUPPLEMENTARY FIGURE 2. Frequency and percentage of SARS-CoV-2 variants\* identified among all sequenced samples, by vaccination status†— California, March–July 2021**

\* Variants and their associated SARS-CoV-2 (Pango) lineages were defined according to the CDC classification system at the time of the report. The four most common variants were displayed separately, and all other identified lineages were grouped together as 'other' variants.

† Fully vaccinated persons had completed all recommended doses of a FDA-authorized COVID-19 vaccine, including Pfizer-BioNTech, Moderna, and Janssen (Johnson & Johnson)  $\geq 14$  days before the positive SARS-CoV-2 test date; partially vaccinated persons had completed a single dose of Pfizer-BioNTech or Moderna COVID-19 vaccine  $\geq 14$  days before the positive SARS-CoV-2 test date. Partially vaccinated persons were not included due to sample size limitations.

**Abbreviations:** FDA U.S. Food and Drug Administration.
